About FiberDock

FiberDock is software used to automate fibre splicing design. It increases quality and consistency while significantly decreasing design time. FiberDock is intuitive, efficient, and evolving.

FiberDock has produced designs used to bring fibre-to-the-home services to 30,000 homes and counting. It is used by multiple design companies and has been approved by splicers.

The FiberDock team is diligent, driven, and dedicated to serve your needs. Let the FiberDock team automate your design today!

Features

Optimize
Optimize fiber counts, cables, and terminals

Automate
Automate cable selection, terminal assignment, tray configuration and more

Export
Export plans, BOM, cable/terminal details, and custom forms

Benefits

Cost
Reduce costs with correct designs and optimized materials

Quality
Increase design quality with optimized count algorithms and consistent design plans

Time
Reduce time with automated, intuitive, and interactive software
